

BALSAMIC CONTROL

RESPIRATORY COMFORT (DUST, POLLEN, ...)

Description

Some horses are particularly sensitive to the quality of the air they breathe. The presence of dust, mould or pollen can cause recurrent respiratory disorders or discomfort when the horse begins working, creating additional nutritional requirements. Such disorders can pose a problem to both horses and riders.

Purpose

BALSAMIC CONTROL is a complementary feed formulated by AUDEVARD Laboratories. It has been designed to provide additional nutrition to meet the respiratory needs of horses that live in dusty environments (pollen, mould etc.) and young racehorses undergoing training.

Formula

This new formula, specially designed to manage respiratory conditions, contains a unique combination of four ingredients (nigella, lemon, eucalyptus and garlic) that have been carefully selected by our experts.

Our advice

Consider advising your customers to clean out their stables regularly (floor, walls and ceilings) to avoid the accumulation of dust, which may harm their horses.

Daily allowance

1 measure = 15g.
1 measure morning and evening.

Professional format

1 kg box - (EAN3515651901905). Sufficient for up to 33 days' use.
5 kg box - (EAN 3515651921927). Sufficient for up to 165 days' use.

RESPIRATORY

Composition for 1 kg
