

EKYFLEX ARTHRO

JOINT SUPPORT

Description

For more than 15 years, EKYFLEX has been the gold standard for professionals seeking to optimise horses' joint function where a long stride, solid bearing or precise movements are required throughout their career. Intensive joint strain creates specific nutritional requirements in horses.

Purpose

EKYFLEX ARTHRO is a complementary feed formulated by AUDEVARD Laboratories. It is designed to provide nutritional support for horses with increased joint needs.

Formula

EKYFLEX ARTHRO's success lies in its formula, which contains over 75% approved and innovative ingredients. Each measure provides 6 g of low-molecular-weight collagen hydrolysate to encourage absorption by the body. Glucosamine, chondroitin and MSM have been selected for their superior quality, and a plant extract, turmeric, completes the formula.

Our advice

You may wish to suggest your customers use HARPAGYL at the same time as EKYFLEX ARTHRO, or alternate between the two, if the horse does not have doping restrictions.

Daily allowance

1 measure of 60ml = 30g

- Athletic: 1 measure per day for 2 months 3 times per year.

- Intensive requirements: 1 to 2 measures per day for 4 to 6 months.
